Abstract of the Disclosure

A paper product that is applied with a water-soluble lotion composition is provided. In one embodiment of the present invention, the lotion composition includes water in an amount up to about 90% by weight of said lotion composition, a water-soluble skin-conditioning component in an amount up to about 75% by weight of said lotion composition, a viscosity modifier component in an amount up to about 10% by weight of said lotion composition, and an optional liquid-coupling component in an amount up to about 60% by weight of said lotion composition. Typically, the add-on level of the lotion composition is between about 1% to about 25% by weight of the paper product. As a result, the paper product can be used to dry the hands of a user, while also imparting certain benefits to the skin as well.
